

SWITCH

The Sustainable Energy People

SWITCH has adopted the following as a working definition of Sustainable Energy:

“The provision of energy through the use of *renewable energy* technology and the principles of *energy conservation* and energy efficiency, in a manner that minimizes long-term damage to the environment, such that the needs of the present are met without compromising the ability of future generations to meet their own needs.”

This definition is taken from the City of Kingston’s Draft Official Plan, Fall 2008.
